■ Floci Setup Guide (AWS & Azure Emulator)

If you want to run AWS services locally without spending money on cloud resources, Floci is one of the easiest tools to start with. You can emulate services like Lambda, S3, Redis, Kafka, SQS, SNS, EC2, DynamoDB, API Gateway, and 45+ AWS services locally.

■ Why Use Floci?

• No AWS account needed
• Unlimited local testing
• Faster than deploying to cloud every time
• Great for backend + DevOps + serverless development
• Runs using Docker only
• Works with AWS CLI & SDKs
• Free & open source

■ Step 1 — Install Docker

Install Docker Desktop from:

https://www.docker.com/products/docker-desktop/

Verify installation:

```
docker --version
docker compose version
```

■ Step 2 — Run Floci

Run the following command:

```
docker run --rm -p 4566:4566 floci/floci:latest
```

Floci will start on: http://localhost:4566

■ Step 3 — Configure AWS CLI

Install AWS CLI: https://docs.aws.amazon.com/cli/latest/userguide/getting-started-install.html Set dummy credentials:

Mac/Linux

```
export AWS_ENDPOINT_URL=http://localhost:4566
export AWS_DEFAULT_REGION=us-east-1
export AWS_ACCESS_KEY_ID=test
export AWS_SECRET_ACCESS_KEY=test
```

Windows (PowerShell)

```
$env:AWS_ENDPOINT_URL="http://localhost:4566"
$env:AWS_DEFAULT_REGION="us-east-1"
$env:AWS_ACCESS_KEY_ID="test"
$env:AWS_SECRET_ACCESS_KEY="test"
```

■■ Step 4 — Test S3 Locally

```
aws s3 mb s3://my-bucket --endpoint-url http://localhost:4566

echo "hello floci" > test.txt

aws s3 cp test.txt s3://my-bucket --endpoint-url http://localhost:4566

aws s3 ls s3://my-bucket --endpoint-url http://localhost:4566
```

■ Step 5 — Run Lambda Locally

```
def handler(event, context):
    return {
        "statusCode": 200,
        "body": "Hello from Floci Lambda!"
    }

zip function.zip lambda_function.py

aws lambda create-function --function-name hello-fn --runtime python3.11 --handler lambda_function.handler --zi
```

■ Step 6 — Test SQS

```
aws sqs create-queue --queue-name orders --endpoint-url http://localhost:4566

aws sqs send-message --queue-url http://localhost:4566/000000000000/orders --message-body "Hello Queue" --endpo
```

■ Recommended Docker Compose Setup

```
services:
  floci:
    image: floci/floci:latest
    ports:
      - "4566:4566"
    volumes:
      - ./data:/app/data
      - /var/run/docker.sock:/var/run/docker.sock
```

■■ Azure Emulator Setup

```
docker run -d -p 4577:4577 -v /var/run/docker.sock:/var/run/docker.sock floci/floci-az:latest
```
